

A 2000 YEAR OLD CROP RESPROUTS IN THE ANDES... "A HISTORY OF THE FORGOTTEN ROOT"

When the Spanish sailed to Peru in 1533 they soon learned of the virtues of Maca and mentioned it in almost every chronicle of the time. From the Highlands of Peru flowed quantities of the precious root. The Spanish fed it to their horses and livestock, and shipped tons of it back to the kings of Spain as a payment of tax. The first Spanish baby born in the Highland did not come until a full 50 years after Pizarro's arrival, and it is speculated that conception was achieved with the aid of the botanical species *Lepidium peruvianum*, known as Maca.

While Maca thrived in the most rugged terrain above 12,000 feet, political uprisings and a change in the popular diet pushed Maca plants close to extinction by the late 1970's. Careful seed harvesting and the resourcefulness of dedicated native people have protected it from extinction.

Families in the vicinity of Lake Junin (Condor, Maqqe, Vicuna and more), and generations before, are owed insurmountable debt for their dedication to the preservation of this astounding, health giving crop. Today, there is a huge upswing in Maca farming in the highlands of Peru, with more than 10,000 acres planted annually. Maca is now eaten up to 3 times a day by Peruvians, from professional athletes to the elderly.

*In Peru, our goals are simple: to produce
pure foods that change peoples lives and to
support farmers who work in harmony with
the environment.*

In Peru, we cultivate our own Maca root without chemicals at 14,000 feet elevation in the mineral-rich highlands of Peru's Altiplano! Our fields are naturally irrigated by

glacial ice-melt and rainfall born in the thunderclouds of the Amazon basin. The result is 100% Maca root, incomparable in potency, freshness and flavor!

ORGANIC RAW MACA

Grown high in the Andes Mountains of Peru, Maca (*Lepidium meyenii*) has been used by the Inca and Peruvian cultures for more than 1,500 years. For maximum health benefits, our Organic Maca powder is a blend of a multitude of Maca root colors found naturally in each harvest. It is grown without chemicals or herbicides.

Maca root was domesticated during the pre-Inca around 3800 B.C, with primitive cultivars of Maca being found in archaeological sites dating back to 1600 B.C. It continued to be cultivated by the Inca centuries ago as a valuable nutritious dietary staple and adaptogen.

For the Andean Indians today, Maca Root is still a valuable commodity. It is also an important staple in the diets of the indigenous peoples, because it has one of the highest nutritional values of any food crop grown in the region.
